New glass developed with help of Marshall Center facility

A new glass with medical, military and communications applications was developed with the aid of a special facility at the Marshall Center. To invent the new glass, researchers conducted experiments in the Electrostatic Levitator facility at the Marshall Center and worked closely with Marshall materials scientist Dr. Jan Rogers. The Electrostatic Levitator allows researchers to process materials without using contaminating containers. NASA TV will carry a live Space Research Update on the invention at noon CDT Tuesday.

Friday last day to order Safety Day meal tickets from administrative officers. For details, see 'Inside Marshall'

Hispanic Heritage Month through Oct. 15. For details, see 'Inside Marshall'

Fiscal 2004 labor and travel charge codes changed

New labor and travel charge codes have been changed for fiscal 2004. To determine the appropriate charge code for use in WebTADS and Travel Manager, go to <http://cfoweb.msfc.nasa.gov/cfoweb/budget.htm> or see "Inside Marshall." For more information, call Fred Davey at 544-7306 or Omana Cawthon at 544-0234.

Seatbelt use mandatory in all vehicles on Redstone Arsenal
